| <b>Team ID</b>       | shaikzz-collab |
| <b>Project Name</b>  | wasteguide-ai  |
| <b>Maximum Marks</b> | 3 Marks        |

### Step 1: Brainstorm and Idea Listing

Each team member lists out as many ideas as possible without judging them at this stage.

| S.No | Team Member | Idea / Suggestion | Category | Group No. |
|------|-------------|-------------------|----------|-----------|
| 1    |             |                   |          |           |
| 2    |             |                   |          |           |
| 3    |             |                   |          |           |
| 4    |             |                   |          |           |
| 5    |             |                   |          |           |
| 6    |             |                   |          |           |

### Step 2: Idea Prioritization

Rate each grouped idea on feasibility and importance, then select the final idea(s) to move forward with.

| Group No. | Final Idea | Feasibility (High/Medium/Low) | Importance (High/Medium/Low) | Priority | Selected (Yes/No) |
|-----------|------------|-------------------------------|------------------------------|----------|-------------------|
| 1         |            |                               |                              |          |                   |
| 2         |            |                               |                              |          |                   |
| 3         |            |                               |                              |          |                   |
